### What's New in the Virtual Proxy?

Virtual proxy is a freeware tool that can help you configurate up to ten proxies in a single browser. Virtual proxy is so simple and self-explanatory that it has no many options to give it more features. All the proxy configuration is managed through a single window. At first glance, Virtual proxy does the job nicely. It is simple to use and doesn't need much of your time to get the job done. In addition to configuring proxies, Virtual proxy also collects useful information regarding your browser. Why Virtual proxy is cool?: You can set as many as 10 proxies with Virtual proxy in one browser, any browser. Just follow the following steps: 1. Launching Virtual proxy 2. Configuring the first proxy. 3. Checking the stats. 4. Adding next proxy and so on. 5. Switching the proxy in browser. You can use the same browser to access different accounts. That is, when you open one browser and enter one account on the social networks, you can switch to the other one and do the same for Gmail, for example. Virtual proxy is the right choice for the people who have multi accounts on social network and their personal website. Once the accounts are configured, these are cached in the Virtual proxy. Virtual proxy makes it possible to have a continuous connection even if the primary account is offline. In addition, Virtual proxy allows you to set proxy in its preferences, for example, you can set IP addresses, port numbers and if you want to check stats, etc. It's ok because configuring Virtual proxy was like the introduction to Internet. You can also choose local port to connect to specific server. Virtual proxy is the perfect tool to check the connection speed and what sites are giving you the best internet speed. Virtual proxy is also the perfect proxy tool for sites that don't let you connect to their servers. For example, you can't access bank website when you are offline. It's a great tool to bypass the banks access policy. Virtual proxy is also best for the users who use different bank sites or credit card sites. Virtual proxy won't
